

AUSTIN DOOR STOP KITS

Door Stop Kits are designed for securing the door of the enclosure in the open position. Kits can be mounted at the top or bottom of the door opening. Two holes must be drilled in the enclosure and in the door. The angle of the door is adjusted by a wingnut and the stop arm slides out of the way when the door is closed. Enclosures must have a "B" dimension of 16" or more and the door must open horizontally.
